DETAILED ACTION

Claims 7-11, 13, and 15-27 have been examined.

A request for continued examination under 37 CFR 1.114 was filed in this application after a decision by the Board of Patent Appeals and Interferences, but before the filing of a Notice of Appeal to the Court of Appeals for the Federal Circuit or the commencement of a civil action. Since this application is eligible for continued examination under 37 CFR 1.114 and the fee set forth in 37 CFR 1.17(e) has been timely paid, the appeal has been withdrawn pursuant to 37 CFR 1.114 and prosecution in this application has been reopened pursuant to 37 CFR 1.114. Applicant's submission filed on April 8, 2005 has been entered.

Allowable Subject Matter

Claims 7-11 are allowed.

Claims 13 and 15-18 are allowed.

Claims 19-22 are allowed.

Claims 23-26 are allowed.

Claim 27 is allowed.

The following is an examiner's statement of reasons for allowance: First, the term "medium dedicated to reproduction" is taken to mean a medium using ROM (read only memory), so that data cannot feasibly be rewritten. A professionally pressed CD or DVD is an example of such a "medium dedicated to reproduction." A medium employing RAM or other rewritable storage means is not considered to be a "medium

dedicated to reproduction.” This definition is based on the language of the instant application (specification, page 6, lines 19-26; and page 7, line 16, through page 8, line 20), and on the Reply Brief dated February 3, 2004, of record in the instant application (page 2, paragraph under “Appellants’ Choice of Terminology”).

The closest prior art of record, Linnartz (U.S. Patent 6,209,092), discloses a reproduction apparatus for reproducing video data and/or audio data from a medium dedicated to reproduction and/or a recordable medium having video data and/or audio data recorded thereon, the video data and/or audio data being generated by superimposing information concerning copying consent on a digitized video signal or audio signal (Abstract; see also column 2, line 26, through column 3, line 67), the reproduction apparatus comprising: a reproducer which reproduces the superimposed information concerning copying consent from the processed data (Abstract; column 5, lines 41-63); and an output controller which performs output control of the reproduced data based on the reproduced information concerning copying consent (column 3, lines 17-67; column 4, line 58, through column 5, line 2; column 6, lines 22-45). Linnartz does not disclose the other elements of claim 7; however, Suzuki (U.S. Patent 5,699,474) teaches demodulating data modulated in accordance with a presumed modulation rule; a temporal store which stores the data demodulated by the demodulator; and an error-corrector which error-corrects the demodulated data stored in a temporal store, the error-corrected data being stored in a temporal store means (column 9, lines 43-50; refer also to Figure 5). Linnartz further discloses data for distinguishing whether a medium is professional medium manufactured by pressing or a

recordable disc (column 1, lines 63-65) implying a medium detector which detects whether a medium is a medium dedicated to reproduction; and discloses that the output controller stops outputting the data if both (1) the data was reproduced from a medium dedicated to reproduction and (2) the reproduced information concerning copying consent indicates that copying once was permitted (column 3, lines 17-67; column 4, line 58, through column 5, line 2; column 6, lines 22-45). However, Linnartz does not disclose or suggest that the output controller stops outputting the data responsive to the occurrence of both (1) that the data was reproduced from a medium dedicated to reproduction and (2) that the reproduced information concerning copying consent indicates that copying once was permitted at one time and no more.

Rather, in Linnartz, copying is to be stopped based only on lack of copying consent for further generations of copies, whether the medium is a medium dedicated to reproduction or not. Cookson (U.S. Patent 5,896,454) teaches a system for controlling copying which distinguishes between ROM media and writable media, but in Cookson, ROM media can always be played (column 5, lines 23-27); it is writable media which cannot be played if their copy state codes that copying once was permitted, but no more. Thus, Cookson teaches away from the claimed invention. Moreover, no other prior art of record supplies the deficiencies of Linnartz and Cookson by providing a teaching or motivation for the element which distinguishes the claimed invention from Linnartz in combination with Suzuki.

The above statement of reasons for allowance has been made with particular reference to claim 7, but each of the other independent claims contains language

parallel to the limitation that makes claim 7 allowable, and is therefore patentable for the same reasons.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Cookson et al. (U.S. Patent 5,896,454) disclose a system and method for controlling copying and playing of digital programs. Bersson (U.S. Patent 6,081,897) discloses an apparatus for monitoring and preventing unauthorized copying of digital data. Yamada et al. (U.S. Patent 6,141,483) disclose a recording medium for recording data and reproducing apparatus for reproducing the data recorded thereon. Sugahara (U.S. Patent 6,823,007) discloses a method for the protection of data reproduction according to both medium protection data and apparatus protection data. Hasebe et al. (U.S. Patent 6,829,592) disclose a data protection system, data preparation device, and data working device.
